1 A Section

A single slide is defined as a frame.

The title of the frame is in the second set of curly braces.

- Bullet points are added via the itemize environment.
- We can also have sub-bullets by adding a further itemize within the first itemize.
 - Like so.
 - This can be continued, although the template only supports a few levels simply.
- ① Numbered lists are added using the enumerate environment.
 - ① And we can go down levels as well.
 - Or go into bullet points.

- It is possible to reveal bullet points one “slide” at a time.
- For example:

- It is possible to reveal bullet points one “slide” at a time.
- For example:
- This appears as the second slide.

- It is possible to reveal bullet points one “slide” at a time.
- For example:
- This appears as the second slide.
- And this as third only.

- It is possible to reveal bullet points one “slide” at a time.
- For example:
- This appears as the second slide.
- This the fourth.

- It is possible to automatically have the bullet points revealed one at a time.

- It is possible to automatically have the bullet points revealed one at a time.
- To do this, we specify a modifier on the itemize environment -

< +- >

- It is possible to automatically have the bullet points revealed one at a time.
- To do this, we specify a modifier on the itemize environment -

$\langle + - \rangle$

- Then everything is automatically generated.

1 A Section

- To add something to the Outline slide (table of contents) create a section.
- Each section will add an entry to the Outline.
- Usually best to generate the slides twice for this.

- Adding images is just the same as normal LaTeX.
- Just add a `graphics include` where you want the image, like so:

Edinburgh Napier
UNIVERSITY

- Columns can be added using the columns environment.
- This allows some layout control of your slides.
- For example, you might want a picture on the right and text on the left as we have here.
- Each column has to be specified using the column environment.

- You might also want to have a text box (or similar) to highlight something on the slide.
- For this, use the block environment

Block Title

Blocks can also be revealed using the same technique as used for itemize, etc.
